Monday: Pomodoro

Your office is full of workaholics. No one takes breaks, No one goes for lunch, and the only interesting thing that you can ever talk about with your workmates, are the new cool updates on **Slack**.

Your team lead is afraid at this pace people will start burning out soon. He contracts you to build an application that will remind your coworkers to take a break.

Specifications

1. A user should be able to log into the application.
2. A user should be able to set the amount of time he/she wants to work. It should not be more than an hour.
3. A user should be able to set the amount of time he/she wants to be on break. It should not be more than 10 min and not less than 5 min.
4. A user should specify what he/she wants to do with their break time before they start working.
5. A user should see how much time they are have left for working or taking a break. (A countdown clock).
6. A user should see how many work sessions he/she has completed.

Project specs

1. Should be presented in a high quality manner.
2. Should be well documented with comments and have a detailed **README**.
3. It should have a detailed specs file with what your project can actually do.
4. It should be published to heroku.
5. You and your pair should be listed as contributors to the project.
6. The project should have a requirements.txt file with all the projects dependencies.
7. The project should be deployed and hosted.
