Getting started with Python

Welcome to the exciting world of Python! You are about to embark on a web development journey using Python's object-oriented programming language.

In this module, we are going to learn the fundamentals of building web applications using Python and its web frameworks. The web frameworks we will use are Flask and Django, but that will come in a bit later.

To start with, we'll focus on the basics of Python as a programming language. Here, we will learn how to install python in our computers, we'll also learn about variables, modules, control flows and loops. Make sure you understand these Python basics, they will help you to easily grasp the more complex concepts that we will encounter in this course.

Let's get started!
